

Cleaning and Maintenance

1. Use mild detergents and a damp cloth to clean the floor
2. If you are having to do some work in the room, cover the floor to avoid scratching the floor
3. Keep liquid off the floor
4. UV light fades natural products, so keep these areas shaded for protection
5. Use protective office mats under rolling chairs
6. Don't use products with abrasive ingredients or solvent based
7. Never use wire brushes and rubber backed mats, they can permanently stain the floor
8. You can re-varnish your floor by gently scratching the existing varnish and all previous maintenance products off with sand paper
9. Place mats outside the front and back door, this way you prevent other abrasive substances from damaging the floor
